

Semester Project Presentation / Viva

Course: Algorithms: Design and Analysis

Total Marks: 5

As part of the semester project, each team is required to give a final presentation/viva on their project work. The presentation should clearly communicate the problem addressed, the methodology used, the main results obtained, and the overall insights from the project. The presentation should build naturally on your approved proposal, your final report, and the feedback received during the interim demo.

Please note that the **project presentations are scheduled for Week 16**, so you should **start preparing for them now**.

The **total duration of the presentation** and the **presentation schedule** will be announced by your instructor. Since different sections may follow slightly different evaluation approaches, the concerned instructor **may also share a separate rubric for their section** if needed.

During the presentation, students should be prepared to answer questions about their work. The question-answer component may also include a coding demo, depending on the expectations of the concerned instructor.

Presentation Expectations

Your presentation should clearly cover:

- the problem and its motivation
- the methodology or algorithmic approach
- implementation and evaluation overview
- results and analysis
- key takeaways, limitations, and future directions

Rubric (5 Marks Total)

1. Problem Motivation and Clarity of Presentation — 1 mark

The presentation clearly explains the problem being addressed, its motivation, and the overall objective of the project. The content should be organized and easy to follow.

2. Methodology and Technical Understanding — 1 mark

The team clearly explains the methodology, algorithmic approach, implementation decisions, and evaluation setup. Students should demonstrate sound understanding of the technical aspects of their project.

3. Results, Analysis, and Discussion — 1 mark

The presentation should communicate the results clearly and include meaningful analysis. Students should explain what the results show and highlight the main insights from their work.

4. **Question Answer / Viva / Demo — 2 marks**

These marks are reserved for the question-answer session, which may include discussion, viva, or a coding demo, as decided by the concerned instructor. This component will assess the team's depth of understanding, clarity in responding to questions, and ability to justify their design, implementation, and evaluation choices.

Note

Students are advised not to wait until the last week. Since the presentations will be held in **Week 16**, start organizing your slides, reviewing your results, and preparing to explain and defend your work clearly.
